

# EAGLE REGISTRY

## WELCOME

This is the **11th EAGLE Newsletter**. With this, we hope to keep you updated on progression of the registry, any planned EAGLE events and important messages.

## STUDY STATUS

Currently the EAGLE Registry is getting closes to our goal of 150 EAGLE cases. At this moment a total of **138 patients** have been included, several inclusions are pending. The number of inclusions for each center are displayed on **page three** of this newsletter. We are confident in reaching our aim of including the additional 12 patients **before the end of 2016** and start analyzing the acquired data.

After the registry closes we look forward to share the initial results with you.

## INCLUDING PATIENTS

We are aware that it can be difficult to **identify EAGLE candidates**. Some of you might not see these patients as outside IFU. Therefore, we are always happy to receive CT-scans and **review** them if you have doubts about **eligibility**.

The CT-scan can be send to us via mail or digitally, however, it is important that the study team is aware of a potential candidate. For **symptomatic** cases it is very important to notify us and register treatment details. The patient can be included after CORE-lab review.

Recently, we were asked if a patient that will receive an **Iliac Branched device** combined with an Endurant mainbody can be included. Because we focus on the performance of the Endurant in challenging infrarenal necks, there are **no objections**.

## REMINDERS AND CLARIFICATIONS

You are entitled to a **compensation** for including patients and subsequently completing the eCRFs. In September we will review the data of all patients. After receiving the 1-year data we will invite you to send us an invoice.

So if you have not submitted all the data from your patients, please do so as soon as possible.

When you require any **help** or you have **questions** about specific eCRFs don't hesitate to contact us. If there are problems with downloading or sending the forms please notify us so we can figure out a **solution**.
